

Admin Panel – Features & Functional Requirements

Tatito Health+ | Complete feature specification, workflows and business rules

Prepared By: Shrestha & Rajveer

Project	Tatito Health+ healthcare super-app
Document	Admin Panel – Features & Functional Requirements, version 2.0 (merged report)
Date	28 September 2026
Prepared By	Shrestha & Rajveer
Source inputs	Detailed Admin Panel Feature Specification (Shrestha) and Admin Panel Feature Summary (Rajveer), combined into one scope
Stack	MongoDB, Express, React, Node.js

The 19 modules

No.	Module	Sidebar group
01	Dashboard	MAIN
02	Users	PEOPLE
03	Staff, Roles & Admin Accounts	PEOPLE
04	Healthcare Providers	NETWORK
05	Doctors & Appointments	CARE
06	Health Records	CARE
07	Pharmacy	COMMERCE
08	Lab Tests	COMMERCE
09	Orders & Payments	COMMERCE
10	Health Plans	COMMERCE
11	Coupons, Offers & Marketing	COMMERCE
12	Content	GROWTH
13	Internships	GROWTH
14	Support & Communication	SUPPORT
15	AI Assistant	SUPPORT
16	Reports & Analytics	SYSTEM
17	Uploaded Files & Documents	SYSTEM
18	Settings, Website Setup & Security	SYSTEM
19	Audit Logs	SYSTEM

SECTION 1

Introduction and scope

Tatito Health+ is a healthcare super-app where patients consult doctors, order medicines, book lab tests, subscribe to health plans, store health records and apply for clinical internships, supported by a network of hospitals, clinics, diagnostic centres and pharmacies. This document specifies the admin panel that controls all of these public features and the platform behind them.

Purpose of the admin panel

- Control every section of the public website from one place, with no code changes needed
- Verify doctors, healthcare providers, uploaded documents and prescriptions before they go live
- Run appointments, pharmacy orders, lab bookings and deliveries end to end
- Manage subscriptions, payments, refunds, coupons, marketing and doctor payouts
- Publish content and blogs, run the internship programme and answer support requests
- Communicate with users and provider groups through notifications and templates
- Monitor the platform through the dashboard and reports, and keep a complete audit trail because the platform handles medical data

Design approach

Every screen in the admin panel is based on a screen or flow of the public website. The structure is inspired by the existing matrimony admin panel (dashboard, members, packages, wallet, blogs, support, staff, uploaded files, website setup), extended with healthcare-specific modules: healthcare providers, appointments, pharmacy, lab tests, health records, internships, the AI assistant, reports and audit logs.

Scope

In scope	19 modules covering users, healthcare providers, care, commerce, growth, support and system administration
Out of scope (v1)	Patient-facing website changes, mobile apps, real payment gateway integration, real video-call and SMS providers (placeholders are provided)
Delivery	Frontend with a service layer that can be connected to an Express and MongoDB backend without changing screens

SECTION 2

Website to admin mapping

Each public website section and the admin module that controls it.

Public website section	Controlled from admin module
Home page: hero, banners, announcements, featured services, quick actions, promotions	Content, Coupons, Offers & Marketing
Doctors: specialties, Find a Doctor, doctor cards	Doctors & Appointments
Instant Consult 24/7	Doctors & Appointments > Instant Consult
Hospitals, clinics and partner institutions	Healthcare Providers
Tatito AI: Ask anything about your health	AI Assistant
Pharmacy: catalogue, Upload Rx, 30-min delivery, partner pharmacies	Pharmacy, Healthcare Providers
Lab Tests: tests, packages, radiology, diagnostic centres	Lab Tests, Healthcare Providers
Health Plans: plans, matrix, calculator	Health Plans
Health Records: reports, prescriptions, vitals	Health Records
Internships: tracks, apply, alumni	Internships
Health Blogs, FAQs, testimonials, trust numbers, footer, cities	Content, Settings & Website Setup
Logo, favicon, contact details, social links, maintenance page	Settings, Website Setup & Security
My Account: profile, addresses, wallet	Users
My Orders, Transactions and Payments	Orders & Payments
Need Help, Contact, Emergency, Pharmacist Chat, notifications	Support & Communication, Pharmacy > Chat
Provider and user document uploads	Uploaded Files & Documents

SECTION 3

Roles and access control

Access is role based. Each role sees only its own modules, and inside a module only the actions it is permitted to perform. Protected routes ensure that no admin page can be opened without logging in.

Role	Main access
Super Admin	Everything, including Settings, Staff, Roles & Admin Accounts, Audit Logs and Reports & Analytics
Doctor	Own appointments, own slots, own reviews and payouts, patient records of own patients
Pharmacist	Pharmacy: products, inventory, prescriptions, orders, chat; partner pharmacy details
Lab Technician	Lab Tests: tests, packages, sample collection, report upload; diagnostic centre bookings
Support Agent	Support, contact queries, emergency requests, notification templates and notifications
Content Manager	Content, Coupons, Offers & Marketing, AI Assistant settings
Internship HR	Internships: tracks, applications, partners, alumni

Permissions are stored per role as View, Create, Edit and Delete for each module and can be changed from Staff, Roles & Admin Accounts without code changes.

SECTION 4

Sidebar structure

Modules are grouped so that the menu stays short and easy to scan.

Group	Menu items
MAIN	Dashboard
PEOPLE	Users, Staff, Roles & Admin Accounts
NETWORK	Healthcare Providers (Hospitals, Clinics, Diagnostic Centres, Pharmacies)
CARE	Doctors & Appointments, Health Records
COMMERCE	Pharmacy, Lab Tests, Orders & Payments, Health Plans, Coupons, Offers & Marketing
GROWTH	Content, Internships
SUPPORT	Support & Communication, AI Assistant
SYSTEM	Reports & Analytics, Uploaded Files & Documents, Settings, Website Setup & Security, Audit Logs

Top bar

- Global search across patients, doctors, providers and orders
- Notification bell with unread count and Mark all read, generated by real events (new order, pending verification, low stock, refund request)
- Profile menu with admin profile, role switch and logout

SECTION 5

Standards every module follows

Standard	What it means
Full CRUD	Every entity can be added, viewed, edited and deleted through a drawer or modal form with validation and inline error messages. Deletion always asks for confirmation.
Smart tables	Every table has search, filters, sortable columns, pagination, row actions, Export CSV of the filtered rows and an empty state.
Real workflows	Status changes are action buttons (Approve, Reject, Move to next status), each recorded in a timeline and in the Audit Log.
Connected data	All modules read and write one shared data store, so a change in one module is visible everywhere it matters.
Feedback	Toast messages for success and errors, loading state on buttons.
Access control	Menus, pages and buttons follow the role's View, Create, Edit and Delete permission. Protected routes redirect anyone who is not logged in to the login page.
Consistent look	Same colours, fonts and components as the public Tatito Health+ website, responsive on desktop, tablet and mobile.

SECTION 6

Module specifications

Every module below is described the same way: purpose, the website section it serves, key features, how it works and its business rules.

MODULE 01 | MAIN

Dashboard

Purpose	A single screen that shows the health of the whole platform and the work that needs attention right now.
Website reference	Summarises every public section: Doctors, Pharmacy, Lab Tests, Health Plans, Internships and the provider network.

KEY FEATURES

- **Platform overview cards:** total users, doctors, hospitals, clinics, diagnostic centres and pharmacies
- **Live stat cards:** today's appointments, pending medicine orders, lab-test bookings and sample collections, revenue, new patients
- **Needs Attention panel** with live counts and direct links: doctor verifications, provider approvals, document verifications, prescription reviews, refund requests, internship applications, low-stock products, unassigned sample bookings, open support tickets
- **Charts:** revenue trend (line), revenue by module (bar), appointments by specialty (donut), plus user registration and order trends
- **Date range filter** (Today / 7 days / 30 days) that really changes the chart data
- **Recent activity:** recent registrations, appointments and orders lists with quick links, and a recent admin activity feed taken from the Audit Log

HOW IT WORKS

Every number is calculated from live module data, so approving a prescription immediately lowers the pending count and updates the charts.

BUSINESS RULES

- Widgets and links are shown only for modules the logged-in role is allowed to view.

MODULE 02 | PEOPLE

Users

Purpose	Manage every person who uses or serves the platform: patients, doctor registrations and operational partners.
Website reference	Login / Register, My Account (profile, address book, wallet), and the Verified badge on doctor cards.

KEY FEATURES

Patients

- Search, create, view, edit, block and unblock, and deactivate or reactivate patient accounts
- **Profile:** name, phone, email, gender, date of birth, city, status
- Family members with relation (add, edit, remove)
- Address book with multiple saved delivery addresses
- **Wallet:** balance, manual credit or debit with a mandatory reason, full history
- Activity history: appointments and orders of the patient are visible inside the profile

Doctor registrations

- **Filters:** Pending, Verified, Suspended
- **Document preview:** medical licence, ID proof, degree certificates and qualifications
- **Actions:** Approve, Reject (reason required), Suspend, Reinstate
- Once verified, the doctor's profile, fees and availability are managed in Doctors & Appointments

Partners

- Pharmacists, lab technicians, phlebotomists and delivery partners
- Add, edit and delete with role, phone and city
- Availability toggle used when tasks are assigned

HOW IT WORKS

A doctor registers on the website and lands in Pending. The admin reviews the documents and approves. The doctor now appears on the website with a Verified badge and can receive bookings.

BUSINESS RULES

- Only Verified doctors can be booked.
- Rejection and suspension need a written reason.
- Blocked or deactivated patients cannot book, order or subscribe.

MODULE 03 | PEOPLE

Staff, Roles & Admin Accounts

Purpose	Control who can enter the admin panel and exactly what each person can do.
Website reference	Not visible on the website; it protects the admin side.

KEY FEATURES

- **Employees / admin accounts:** create, edit, deactivate, reset password, and assign a role to each account
- **Roles:** Super Admin, Doctor, Pharmacist, Lab Technician, Support Agent, Content Manager, Internship HR
- **Permission matrix:** every module against View, Create, Edit and Delete, editable with checkboxes
- Create, rename and delete custom roles
- Demo login with a role dropdown to test each role's view

HOW IT WORKS

Changing a checkbox in the matrix updates the sidebar, routes and action buttons immediately for that role.

BUSINESS RULES

- A role that still has staff assigned cannot be deleted.
- Super Admin permissions cannot be removed.
- A user without Create/Edit/Delete permission does not see those buttons at all.

MODULE 04 | NETWORK

Healthcare Providers

Purpose	Onboard, verify and manage the institutional partners of the platform: hospitals, clinics, diagnostic centres and pharmacies.
Website reference	Doctors, Lab Tests and Pharmacy pages, where partner institutions supply doctors, tests and medicines.

KEY FEATURES

Common actions for every provider type

- Add, edit, view and delete provider profiles with registration information
- Review provider documents (registration certificates, licences), verify them, and Approve or Reject the registration with a reason
- Activate or deactivate a provider to control whether it is live on the platform

Hospitals

- Manage hospital profiles and documents; approve or reject; activate or deactivate
- View the doctors associated with each hospital

Clinics

- Manage clinic profiles, staff and registration information
- Verify documents, approve or reject, and manage clinic status

Diagnostic Centres

- Manage centres, the tests they offer, and their documents
- Monitor centre bookings, sample status and reports (worked through the Lab Tests module)

Pharmacies

- Manage pharmacies together with their medicines, stock and pricing
- Verify pharmacy licences; monitor prescriptions and orders handled by each pharmacy (worked through the Pharmacy module)

HOW IT WORKS

A provider registers and lands in Pending. The admin verifies the uploaded documents and approves the registration. The provider becomes Active and can receive bookings and orders; deactivating it hides it again.

BUSINESS RULES

- Only approved and active providers can receive bookings or orders.
- Rejection needs a written reason.
- A provider's documents are managed centrally in Uploaded Files & Documents.

MODULE 05 | CARE

Doctors & Appointments

Purpose	Run the complete consultation business: doctor profiles, schedules, bookings, instant consults, reviews and doctor payments.
Website reference	Specialties carousel, Find a Doctor in 3 steps, doctor cards with rating, fee and Next Slot, Instant Consult 24/7.

KEY FEATURES

Doctors

- Add, edit, delete: photo, specialty, degree and qualifications, licence details, experience, hospital or clinic, city, fee, consultation type (online / in-person / both), availability, bio
- Rating is calculated automatically from approved reviews

Specialties

- Name, icon, description and active toggle; feeds the website specialties carousel
- A specialty that is in use cannot be deleted

Slots

- Weekly grid per doctor (Monday to Sunday) with working hours
- Slot duration options: 10, 15, 20 or 30 minutes
- Toggle a slot Available or Blocked; add leave dates
- Booked slots show the patient and cannot be blocked

Appointments

- View, search and filter all appointments; booking form shows only the free slots of the chosen doctor for the chosen date
- **Statuses:** Booked, Confirmed, Completed, Cancelled, No-show
- Confirm an appointment, or reschedule it to another free slot (old slot is released)
- Cancel and refund: creates a refund request linked to the payment
- Mark completed: prescription notes and medicines are saved to the patient's Health Records
- Detail drawer with full timeline

Instant Consult

- Doctors switch Online or Offline
- Live waiting queue with a ticking wait timer
- Red alert when a patient waits more than 15 minutes
- Assign a doctor, start and end the consult; a call log stores duration and type (video / audio)

Reviews and Payouts

- Reviews: approve, hide, delete
- Payouts: consultations count, gross, commission %, net payable, Pending or Paid
- Mark as paid creates a transaction and an audit entry

HOW IT WORKS

Patient selects specialty, date and city on the website. The system lists verified doctors with a free slot. The patient books and pays. The slot is locked, a transaction is created, the appointment appears as Booked and the doctor's payout count increases.

BUSINESS RULES

- A slot can be booked by only one patient.
- Cancelling a paid appointment automatically raises a refund request.
- Commission percentage is read from Settings.

MODULE 06 | CARE

Health Records

Purpose	Give staff a safe, read-focused view of each patient's medical history, with a complete trail of who looked at it.
Website reference	Health Records page: Lab Reports, Prescriptions, Vaccinations, Allergies and Vitals, described as encrypted and HIPAA compliant.

KEY FEATURES

- Patient search and selection
- **Lab Reports:** filled automatically from completed lab bookings, with a PDF preview
- **Prescriptions:** filled from completed appointments and approved uploads
- **Vaccinations:** vaccine, date, dose, next due (add, edit, delete)
- **Allergies and Vitals:** allergy and severity; BP, sugar, weight, height, pulse with a trend chart
- **Access Log:** read-only table of staff name, patient, record type and time

HOW IT WORKS

Most records are created automatically by other modules. Whenever a staff member opens a patient's records, an Access Log entry is written without any manual step.

BUSINESS RULES

- Every view of a record is logged and the log cannot be edited or deleted.
- Reports and prescriptions are read-only for admins; only vaccinations and vitals can be edited.

MODULE 07 | COMMERCE

Pharmacy

Purpose	Manage the medicine catalogue, stock, prescription verification, orders and delivery.
Website reference	Certified Pharmacy page: categories, brand filters, Rx Required and Low Stock tags, Upload Rx, 30-minute delivery, Free Pharmacist Chat.

KEY FEATURES

Products, Categories, Brands

- Product: name, brand, category, pack size, MRP, discount %, image, description, stock, low-stock threshold, Rx Required, active, and the partner pharmacy it belongs to
- Selling price is calculated; Low Stock and Out of Stock badges appear automatically
- Categories and brands can be edited but not deleted while products use them

Inventory

- Batches with batch number, expiry date and quantity; add batch and adjust stock with a reason
- Near-expiry badge (within 60 days) and Expired badge; total stock is the sum of batches

Prescription verification

- Queue of uploaded prescriptions with image preview and zoom
- Approve, or Reject with a reason; add internal notes

Orders

- Create an order: patient, products, quantity, address, coupon, payment method
- Totals include discount, coupon, delivery fee and tax; payment status is shown and filterable
- Status stepper: Placed, Verified, Packed, Dispatched, Delivered, plus Cancel
- Cancellation and refund handling; invoice is generated when the order is Verified

Delivery and Chat

- Assign a delivery partner to a Packed order; Assigned, Out for delivery, Delivered; ETA field
- Free-delivery threshold rule (for example free above \$25)
- Pharmacist chat inbox with reply and mark resolved

HOW IT WORKS

Patient uploads a prescription. The pharmacist approves it. The order can now be Verified, then Packed (stock reduces), a delivery partner is assigned, the order is Delivered, and the invoice and transaction are marked paid.

BUSINESS RULES

- An order containing an Rx-required item cannot be Verified until its prescription is Approved.
- Packing reduces stock batch by batch (earliest expiry first).
- Cancelling restores stock and raises a refund request if the order was paid.

MODULE 08 | COMMERCE

Lab Tests

Purpose	Manage the diagnostic catalogue, home sample collection and report delivery.
Website reference	Lab Tests page: Doctor Created Health Checks, Top Booked Tests, Popular Health Checkup Packages, Vital Organs Check, X-Rays and Scans, 10-hour report guarantee.

KEY FEATURES

Tests

- Name, code, number of parameters, sample type, fasting yes or no, report time in hours, MRP, discount %, active, and the diagnostic centre that offers the test

Health Checks and Organ Categories

- Condition groups such as Diabetes, Heart, Thyroid, Kidney, Liver, Women's Health, Senior Citizen
- Assign tests to each group with a multi-select

Packages

- Name, badge (Popular, Best Value, Fever Special), included tests or biomarkers, price, discount %, delivery hours
- Biomarker count is calculated automatically

Radiology

- Scan types: X-Ray, CT Scan, Ultrasound, MRI with price
- Bookings: Booked, Scheduled, Done, Report Uploaded

Sample Collection and Reports

- Create a booking: patient, tests or packages, address, date and time slot
- Status: Booked, Assigned, Collected, In Lab, Report Ready
- Assign only available phlebotomists
- Upload report (PDF) completes the booking

HOW IT WORKS

Patient books a test and chooses a slot. Admin assigns a phlebotomist who collects the sample. After the lab finishes, the report is uploaded. It appears automatically in the patient's Health Records and a notification is created.

BUSINESS RULES

- A phlebotomist marked unavailable cannot be assigned.
- A booking cannot be marked Report Ready without a report file.

MODULE 09 | COMMERCE

Orders & Payments

Purpose	One place to see all money movement across pharmacy, lab, appointments and plans, including refunds, invoices and revenue.
Website reference	Cart, Track Your Orders, My Orders, Transactions and Payments in the account menu.

KEY FEATURES

All Orders

- Unified list with a type badge: Pharmacy, Lab, Appointment, Plan
- Filters by type, payment status and date; row opens the correct detail drawer

Transactions and Revenue

- Transaction history: transaction ID, order ID, method (Card, UPI, Wallet, Cash), amount, status (Successful, Pending, Failed), date
- Summary cards: total collected, pending, refunded; revenue tracking by module and period
- Add a manual transaction; mark as paid or failed

Refunds

- Queue created from cancellations and plan refund requests
- Approve to the original method or to the wallet; Reject with a reason
- Approval marks the linked order or payment as Refunded

Invoices and Wallet

- Invoices are generated automatically and open as a printable page
- Wallet balances of all patients with manual credit and debit history

HOW IT WORKS

A paid appointment is cancelled. A refund request appears. The admin approves it to the wallet. The patient's wallet balance increases and the payment status becomes Refunded.

BUSINESS RULES

- One currency is used everywhere, set in Settings.
- Wallet refunds really change the patient's wallet balance.

MODULE 10 | COMMERCE

Health Plans

Purpose	Create and manage subscription plans and make their benefits work automatically.
Website reference	Health Plans page: Starter, Family Care, Executive Gold and VIP Concierge, monthly and annual billing, feature matrix, savings calculator, 30-day money-back guarantee.

KEY FEATURES

Plans and benefits

- Create, edit, delete and activate or deactivate plans: name, tagline, pricing and billing duration (monthly price, annual price), maximum family members, Most Popular flag
- Benefit editor: free consultations per month, pharmacy discount %, lab discount %, free home sample, annual checkups, ambulance benefit, care manager, and custom benefit lines
- Annual saving percentage is calculated automatically

Subscriptions

- Create a subscription for a patient (creates a payment)
- Upgrade, downgrade, cancel, renew; add family members up to the plan limit

Benefit usage

- Progress bars per subscriber, for example free consultations 4 of 6 used

Refunds and calculator

- 30-day money-back requests with approve or reject
- Editable slider ranges and defaults for the website savings calculator

HOW IT WORKS

A patient buys Family Care. From then on, new pharmacy and lab orders get the plan discount automatically and each free consultation reduces the usage counter.

BUSINESS RULES

- A plan with active subscribers cannot be deleted.
- Approving a refund cancels the subscription and credits the wallet.

MODULE 11 | COMMERCE

Coupons, Offers & Marketing

Purpose	Control discount codes, promotional cards and banners, and marketing campaigns.
Website reference	Featured Promotions on Home (Up to 40% off, 60% off package, Free delivery) and offer strips on the Pharmacy page.

KEY FEATURES

Coupons

- Unique code, percentage or flat value, maximum discount, minimum order amount, applies to (Pharmacy, Lab, Doctor, Plans, All), start and expiry date, usage limit, per-user limit, active toggle
- Coupon validation is used when creating orders: invalid, expired and below-minimum cases show clear errors

Offers and promotional banners

- Featured Promotions: badge text, title, description, link, colour, active toggle, order up or down
- Promotional banners and offer strips for the Home and Pharmacy pages

Marketing notifications

- Send offer and campaign notifications to users or provider groups, using the Notifications feature of Support & Communication

HOW IT WORKS

Admin creates WELCOME20 for Pharmacy with a 500 minimum. It is applied while creating an order and usage count increases.

BUSINESS RULES

- Coupon codes must be unique.
- Expired or fully used coupons are rejected automatically.

MODULE 12 | GROWTH

Content

Purpose	Edit everything that appears on the public website without touching code.
Website reference	Health Blogs, home banners, announcements, featured services, quick action cards, FAQs, testimonials, trust numbers (98%, 1M+), footer and cities.

KEY FEATURES

Blogs

- Create, edit, publish or unpublish, and delete blogs
- Title, slug (auto), category, author, cover image and other images, content editor with basic toolbar, tags, SEO title and description, Draft or Published, publish date, preview
- Manage blog categories and tags

Other website content

- Homepage banners with reorder and active toggle
- Announcements and featured services shown on the site
- FAQs grouped by Pharmacy, Plans, Fellowship and General
- Testimonials with name, text, rating and section
- Trust Stats: editable numbers and labels
- Pages: Terms, Privacy, About, plus other configurable website content
- Cities: served cities with active toggle

HOW IT WORKS

Admin publishes a blog. It appears in Health Blogs for You on the website with its category and date.

BUSINESS RULES

- Only Published items are shown on the website; Draft items stay hidden.

MODULE 13 | GROWTH

Internships

Purpose	Run the fellowship and clinical rotation programme from listing to selection.
Website reference	Internships page: tracks with stipend and duration, Apply for Track, how the application works, alumni testimonials, fellowship FAQs.

KEY FEATURES

Tracks and listings

- Create, edit and delete listings; publish or unpublish them on the website
- Type (Fellowship, Clinical Rotation, Lab Pathology), organisation, description, duration, weekly hours, monthly stipend, skills tags, open positions, syllabus, application deadline, eligibility, Open or Closed

Applications

- Applicant, email, track, CV, statement of intent
- Pipeline: Applied, Case Review (with schedule), Selected or Rejected
- Send offer email creates a notification

Partners and Alumni

- Partner organisations and alumni testimonials (add, edit, delete)

HOW IT WORKS

Selecting an applicant reduces the track's open positions by one. When positions reach zero, the track closes automatically.

BUSINESS RULES

- Selection is blocked when no positions are open.
- Reverting a selection restores one position.

MODULE 14 | SUPPORT

Support & Communication

Purpose	Handle everything users send to the company and the messages the company sends to users and provider groups.
Website reference	Need Help hotline, Contact us, 24/7 Emergency, Free Pharmacist Chat.

KEY FEATURES

Support Tickets

- Subject, user, category, priority (Low, Medium, High), status (Open, In Progress, Resolved, Closed), assignee
- Assign, reply in the thread with internal notes, change status, close and reopen tickets

Contact Queries

- View, search and filter contact submissions; mark as read or replied; reply box; mark resolved

Emergency Requests

- Priority highlight, assign to staff, mark handled

Notification Templates

- Templates for SMS, Email and Push with variables such as {{name}} and {{orderId}}, live preview and Send test

Notifications

- Send notifications to individual users, all users, or provider groups (doctors, hospitals, clinics, diagnostic centres, pharmacies)
- Notification history: audience, channel, message, sender and time

HOW IT WORKS

A ticket is opened, assigned to a support agent, answered in the thread and moved to Resolved. The full history stays visible in the drawer.

BUSINESS RULES

- Only the assigned agent or a Super Admin can close a ticket.
- Emergency requests are always shown at the top of the list.

MODULE 15 | SUPPORT

AI Assistant

Purpose	Configure the Tatito AI health assistant and keep it safe.
Website reference	Ask anything about your health, with suggested chips and a medical disclaimer.

KEY FEATURES

Settings

- Assistant name, enable toggle, disclaimer text
- Suggested chips such as Fever and Cold, Skin Allergies, Back Pain, High Blood Pressure (add, edit, remove)

Query Logs

- Patient, query, reply summary, time, flag toggle, Send to doctor review
- Test box: type a query and see a sample reply

Safety Rules

- Keyword list (for example chest pain, breathing difficulty) with severity and escalation message

HOW IT WORKS

If a query contains a Safety Rule keyword, a red Consult a doctor now card is shown and the query is logged as flagged.

BUSINESS RULES

- The disclaimer text is always displayed with AI answers.
- Flagged queries stay in the log for review.

MODULE 16 | SYSTEM

Reports & Analytics

Purpose	Give administrators downloadable, filterable reports for planning and monitoring the platform.
Website reference	Not visible on the website; supports operational and business decisions.

KEY FEATURES

- **Registration reports:** users, doctors and providers registered over time
- **Appointment reports:** volume, status and specialty breakdown
- **Order reports:** medicine orders and their status
- **Lab-test reports:** bookings, sample status and report completion
- **Payment reports:** collected, pending, failed and refunded amounts, with revenue by module
- **Subscription reports:** new, active, cancelled and renewed health plan subscriptions
- **Application reports:** internship applications by track and pipeline stage
- Date range and module filters on every report; Export CSV of the filtered data

HOW IT WORKS

The admin opens a report, selects the date range and filters, reviews the table and charts, and exports the result when needed. Numbers come from the same live data as the Dashboard.

BUSINESS RULES

- Reports show only data from modules the logged-in role is allowed to view.

MODULE 17 | SYSTEM

Uploaded Files & Documents

Purpose	Verify the documents submitted by users and providers, and manage all media files used on the platform.
Website reference	Doctor, hospital, clinic, diagnostic centre and pharmacy registration uploads, and images shown across the website.

KEY FEATURES

Document verification

- View and preview provider and user documents: medical licences, ID proof, degree certificates, registration certificates, pharmacy licences
- Verify or Reject each document (reason required)
- Filter by owner, document type and status (Pending, Verified, Rejected)

Media manager

- Upload, rename, delete and preview files

HOW IT WORKS

A doctor or provider uploads documents at registration. The admin previews each one and marks it Verified or Rejected, then completes the approval in Users or Healthcare Providers.

BUSINESS RULES

- Rejecting a document needs a written reason.
- Every verification decision is written to the Audit Log.

MODULE 18 | SYSTEM

Settings, Website Setup & Security

Purpose	Platform-wide configuration that every other module depends on, plus the public website's identity and the security of the admin panel.
Website reference	Currency, tax, delivery fee rule and OTP behaviour seen across the website; logo, contact details, footer and social links.

KEY FEATURES

General and Website Setup

- Site name, logo, favicon, support email and phone, contact details, social links
- Footer and announcement settings
- Maintenance controls to switch the public website into maintenance mode

Localization

- Currency, date format, timezone

Payments

- Tax percentage, doctor commission percentage, delivery fee rule, payment gateway placeholders

Admin profile and Security

- Admin profile: view and edit own details, change password
- OTP and Security: OTP on or off, expiry, session timeout
- Protected routes and role-based access enforced across the panel

Notifications, Addons and Backup

- Notifications: switch each system event on or off
- Addons: enable or disable optional features
- Backup: export all data as JSON, import to restore, reset demo data

HOW IT WORKS

Changing the currency or tax percentage immediately changes every amount shown in the panel.

BUSINESS RULES

- Only Super Admin can open Payments and Security settings.
- Every admin can edit their own profile and password.

MODULE 19 | SYSTEM

Audit Logs

Purpose	A tamper-proof history of every change made in the admin panel, important because the platform holds medical data.
Website reference	Supports the website's privacy and security promises.

KEY FEATURES

- Entry created automatically for every create, update, delete and status change
- Fields: user, role, action, module, record ID, summary, timestamp
- Filters by module, user and date; Export CSV

HOW IT WORKS

Approving prescription RX-102 creates the entry: Pharmacist Aman approved RX-102, Pharmacy, 10:42.

BUSINESS RULES

- Audit entries are read-only and cannot be deleted by anyone.

SECTION 7

Status lifecycles

Item	Statuses
Doctor account	Pending > Verified / Rejected; Verified > Suspended > Reinstated
Hospital, clinic, diagnostic centre, pharmacy	Pending > Approved / Rejected; Approved (Active) <> Inactive
Uploaded document	Pending > Verified / Rejected
Patient account	Active <> Blocked / Deactivated
Appointment	Booked > Confirmed > Completed / Cancelled / No-show
Instant consult	Waiting > Assigned > In Consult > Ended
Prescription	Pending > Approved / Rejected
Pharmacy order	Placed > Verified > Packed > Dispatched > Delivered (Cancelled at any step before Dispatched)
Delivery	Assigned > Out for delivery > Delivered
Lab sample	Booked > Assigned > Collected > In Lab > Report Ready
Radiology booking	Booked > Scheduled > Done > Report Uploaded
Payment	Pending > Successful / Failed; Successful > Refunded
Subscription	Active > Expired / Cancelled; Renewed returns to Active
Refund	Requested > Approved / Rejected
Support ticket	Open > In Progress > Resolved > Closed; a Closed ticket can be reopened
Internship listing	Unpublished <> Published; Open <> Closed
Internship application	Applied > Case Review > Selected / Rejected
Blog and content	Draft > Published (and back to Unpublished)

SECTION 8

Implementation phases

Modules are built in dependency order so that each phase is fully working before the next begins.

Phase	Modules and deliverables
Phase 1: Foundation	Central store and services, shared components, layout, login and role-based access, protected routes, Dashboard, Settings & Security, Audit Logs, Users, Staff, Roles & Admin Accounts
Phase 2: Providers and care	Healthcare Providers, Uploaded Files & Documents, Doctors & Appointments (slots, instant consult, reviews, payouts), Health Records
Phase 3: Commerce	Pharmacy, Lab Tests, Orders & Payments, Coupons, Offers & Marketing, Health Plans
Phase 4: Growth and support	Content, Internships, Support & Communication (tickets, queries, notifications), AI Assistant
Phase 5: Reporting and polish	Reports & Analytics, Website Setup, notification bell, global search, CSV export polish, documentation

Definition of done for every phase

- All tables support add, view, edit and delete with validation
- Every button performs a real action and shows feedback
- Changes appear in other modules where they are related
- Role permissions are applied to menus, pages and buttons
- Audit entries are written for every change

SECTION 9

Overall Admin Panel Workflow

How the major modules connect and how an administrator uses the system from login to reports.

Stage	What the administrator does
1. Login	Logs in with a staff account. The role decides the menus, pages and buttons that appear; protected routes block everything else.
2. Dashboard	Reads the overview cards and charts, then works through the Needs Attention panel: pending doctor and provider approvals, document verifications, prescriptions, refunds, applications, low stock and open tickets.
3. Management	Maintains the people and catalogues behind the platform: patients and partners (Users), staff and permissions, doctors, hospitals, clinics, diagnostic centres and pharmacies, and the pharmacy, lab, plan, coupon and content catalogues. Documents are verified in Uploaded Files & Documents.
4. Assignments and operations	Runs daily operations: confirms and reschedules appointments, assigns doctors to instant consults, verifies prescriptions and packs orders, assigns delivery partners and phlebotomists, uploads lab reports, moves internship applicants through the pipeline, and answers tickets, queries and emergencies.
5. Payments and refunds	Reviews transactions, approves or rejects refunds, credits or debits wallets, and pays doctor payouts. Plan subscriptions and coupons apply their benefits automatically to orders.
6. Communication	Sends notifications and marketing campaigns to users and provider groups, using templates, and keeps the notification history.
7. Monitoring	Tracks live counts and statuses on the Dashboard, watches instant-consult waits and low-stock alerts, reviews AI Assistant flagged queries, and checks the Audit Log and record Access Log for accountability.
8. Reports and settings	Generates and exports reports (registrations, appointments, orders, lab tests, payments, subscriptions, applications) and updates settings, website setup and security. A change in Settings, such as currency or tax, flows through every module.
